SUMMARY

Data Engineer with **5+ years** of experience designing, building, and maintaining end-to-end **ETL/ELT pipelines** and analytics-ready datasets across **AWS, Azure, and GCP**. Skilled in **Python, SQL, PySpark, Databricks, and Apache Airflow** to ingest data from files, databases, and external APIs, model it for reporting, and ensure reliability through monitoring and automated data quality checks. Actively leverages **AI tools** (Claude Code, Codex) in daily workflow and adapts quickly as technology evolves.

SKILLS

Languages: Python, SQL, PySpark, Java, Pandas

Data Engineering: ETL/ELT Pipelines, API Ingestion, Data Modeling, Data Validation, Data Quality, Schema Evolution, Batch Processing, Query Optimization, Performance Tuning, Data Warehousing

Platforms & Tools: Databricks, Apache Airflow, Azure Data Factory, MongoDB, SQL Server, BigQuery, Snowflake, AWS (S3), Azure, GCP, Docker, Git, Power BI

Core CS & AI: Data Structures & Algorithms, Schema Design, Problem Solving; Claude Code, Codex, Prompt-Driven AI Workflows

EXPERIENCE

Data Engineer

Ascendeum

June 2025 – July 2026

Remote

- **ETL Automation:** Built and automated end-to-end ETL pipelines processing **500M+ ad tech events/month** from Amazon S3 into MongoDB, powering analytics dashboards used by **50+ stakeholders**.
- **PySpark Migration:** Migrated batch workflows from Pandas to PySpark, achieving **~5x faster** processing on **200GB+ daily datasets** while improving stability at scale.
- **Multi-Client Ingestion:** Designed a reusable, multi-client data ingestion system to fetch datasets from multiple external APIs, enabling faster onboarding of new clients with shared pipelines.
- **Orchestration:** Orchestrated pipelines in Apache Airflow with dependencies, retries, and backfills for reliable delivery of ad and auction datasets across environments.
- **Data Modeling:** Modeled raw event and ad auction data into analytics-ready datasets and KPIs, enabling near real-time campaign optimization.
- **Business Impact:** Partnered with business and strategy teams to translate goals into data-driven recommendations, contributing to a **12–15% increase in client ROI**.

Data Engineer

Deloitte

August 2021 – May 2025

Bengaluru, India

- **Cloud Pipelines:** Designed and maintained Azure Data Factory and Azure Databricks pipelines ingesting **10+ sources** and processing **20M+ records weekly** (~1TB/month).
- **Reusable Components:** Built reusable PySpark and SQL components with parameterized logic, reducing pipeline development time by **30%** and improving maintainability.
- **Reporting Models:** Developed curated SQL models and reporting views for dashboards used by **200+ users**, improving query performance by **40%**.
- **Query Optimization:** Tuned SQL Server reporting workloads through indexing, statistics maintenance, and query optimization, reducing report runtimes by **20–25%**.
- **Reliability:** Improved data pipeline reliability to **99.9% uptime** using automated data quality checks, proactive monitoring and alerts, and schema evolution handling.

EDUCATION

Institute of Engineering & Technology (IET DAVV)

Bachelor of Engineering – Information Technology

Indore, India

July 2017 – July 2021

Lakshmi Narain College of Technology

Master of Business Administration – Finance

Completed alongside full-time role at Deloitte.

Bhopal, India

October 2021 – August 2023
